

RAPID is a proud distributor for:

BOOM & BASKET IRRIGATION

We have partnered with GTI to offer their Boomerang Basket Irrigation System & their available is their

complete line of booms. Simple or complex, we can work with GTI to provide the solution to fit your needs.

FERTILIZER INJECTORS

Our partnership with Chemilizer allows us to offer their diaphragm fertilizer injectors.

These injectors are extremely durable because of their unique diaphragm design.

These cost effective units are also backed by the best warranty in the business. Our mobile injector cart makes using them even easier.

PORTABLE INJECTOR CART

Our portable injector cart is available with or without an injector (for use with existing injector).

Available 8 or 12 gallon tank with sloped bottom and cover makes for easy cleanup and spill free use. Semi pneumatic wheels and 1.25" powder coated steel tube frame.

RAPID is a proud distributor for:

Craftsman Quality in Conveying and Process Automation

FLAT & POT FILLERS

Used to fill a variety of flats & pots KASE fillers incorporate a unique auger/brush system to sweep off containers. KASE offers two models; the "B-Line", and "N-Line". Several optional items allow you to get just what you're looking for.

"GOBBLER" BALE BREAKER

The "GOBBLER" is fitted with an open back hopper and hydraulic lift gate to allow 4' x 4' x 8' tall bales to be loaded with a forklift or pallet jack. This can be used with a conveyor system to feed multiple fillers.

CUSTOM MIXING LINES & SOIL CONVEYOR

KASE soil conveyors come in standard widths of 16" & 24" and basic lengths of 12' with 6' & 12' add-on sections available. KASE can also custom build a complete system tailored to your production needs. Call us today to get your project started.

RAPID TRANSPLANTER

RAPID Transplanters have been in use for over 10 years now and have proven to be reliable, simple and productive! Our Series 2 gripper design has proven to be the single biggest advancement since we started. Our transplanters do a great job on a wide range of varieties; even on plants like begonias, snap dragons, marigolds, pansies, vegetables, petunias, dusty millers, etc.

Our customers have commented on how well their Series 2 transplanter consistently plants just about anything they throw at it. RAPID Transplanters are also known industry wide for being easy to operate, simple to work with, and backed by a company who strives to provide you with friendly, helpful support personnel.

RAPID TAGGER

The RAPID Tagger is quite possibly the best tagger on the market today. We've heard comments like this from our current tagger owners. They like it's simple design, and it's proven reliability.

Taggers save you money by automating the tedious labor intensive task of tagging flats. The standard tagger with optional 3rd head can do up to 750 (18-01) flats in one hour-- how many people does it take to do that?

RAPID STICKING LINE

By mechanizing your sticking crew, you can expect a substantial increase in productivity. Built from aluminum & stainless steel, this sticking line will provide a steady flow of material to your crew. Available in 8, 16, & 24 station models. Can be integrated to control your filler or Ellegard machine.

HYDRO-VEYOR

The RAPID Hydro-veyor is our "precision watering conveyor". Adjustable water wands put out a fine water "curtain" soft enough for plug trays. Wands are also height adjustable to accommodate hanging baskets with attached hangers. Available in 5' & 8' lengths and built with stainless steel and aluminum; the RAPID Hydro-veyor is built to be durable and rust free.

RAPID DIBBLER

This pneumatically operated machine uses a photo eye to start the dibbler's cycle. A timer provides delay for accuracy, and the cylinder presses the dibble board down onto the tray creating nicely dibbled flats for transplanting. The depth is easily adjusted with a hand crank. Dibble boards are available to fit your specific needs.

RAPID-VEYOR

PMC (Portable Modular Conveyor)

Portable Modular Conveyor offers great flexibility using drive (motorized) sections to power slave sections. Up to 100' can be powered with one drive. Our unique Drop-N-Lock system uses a rugged shaft to transfer power between sections. This means quiet

running low maintenance conveyor. Sections available in 12', & 20' lengths. Drives have variable speed w/ forward/reverse controls. Optional accessories include cart, corner kit, and stands.

SAC (Standard Aluminum Conveyor)

Standard conveyor is offered in 12', 24', 36, & 48' standard lengths (custom lengths also available), widths 12" or 15". Primary uses include planting lines, labeling, or permanent installations. Controls are variable speed with forward/reverse.

ECONO-LITE

Intended for permanent installations, this conveyor is economically priced. The aluminum box frame, "v"-guide belt, and variable speed control with forward & reverse make for premium features. This belt-over-roller conveyor can be used in runs of up to 200' in length. Optional items include corner kits, mounting brackets, and legs.
